

Aditya Bali

Backend Developer | Building Secure APIs, Server-Side Applications & Database Solutions

Mumbai, Maharashtra | Email: baliaditya72@gmail.com | Phone: +91 8080538785 | [GitHub](#) | [Portfolio](#) | [LinkedIn](#)

Summary

Backend Developer with hands-on experience building scalable server-side applications using Node.js, Express.js, MongoDB, and MySQL. Skilled in developing RESTful APIs, implementing authentication and authorization, database design, and backend performance optimization. Experienced in integrating third-party services and AI-powered APIs while ensuring secure and efficient application architecture. Passionate about solving complex problems and building reliable, high-performance backend systems.

Projects

AI FitTrack Web App — Full Stack Fitness Tracking Website

Live : <https://ai-fittrack-app.onrender.com> / [Github repository](#)

- **Full-Stack Development:** Built and deployed a production-grade full-stack fitness app with **React 19 + TypeScript** frontend and **Node.js + Express** backend; achieved page load under 1.2s via code splitting and lazy loading, with MongoDB storing data across 6 collections and JWT + bcrypt securing all authenticated routes.
- **AI Food Recognition:** Integrated Google Gemini 2.5 Flash Vision API for AI food image recognition — automated calorie detection from meal photos, eliminating manual logging for **100% of test users**.
- **State Management System:** Engineered a global state management system using **React Context API** with 3 context providers (food logs, activity logs, user profile) synchronising real-time data across 8+ pages — eliminating prop-drilling and reducing component re-renders by consolidating shared state..
- **Personalized Onboarding:** Designed a multi-step onboarding flow with calorie calculation logic, fitness goal adjustment (lose/maintain/gain), and interactive sliders for personalized intake and burn targets.
- **Analytics Dashboard:** Designed a 5-step personalised onboarding flow with dynamic calorie calculation logic supporting 3 fitness goal modes (lose/maintain/gain) and interactive sliders — generating custom daily intake and burn targets unique to each user's profile.
- **REST API & Security:** Implemented 15+ protected REST API endpoints with JWT middleware, modular Express route architecture, and user-scoped data isolation — achieving average API response time under 200ms with zero cross-user data leakage in testing.
- **Responsive UI Design:** Developed a responsive dark-mode UI using **Tailwind CSS v4** with a library of 20+ reusable components, achieving a 95+ Lighthouse performance score and seamless adaptive navigation across mobile, tablet, and desktop breakpoints.

AI-Powered Portfolio Analyzer | [Github repository](#)

- **AI Platform Development:** Built an AI-driven platform to evaluate candidates' professional presence across GitHub, resumes, and portfolio websites.
- **GitHub Analyzer:** Developed a GitHub Analyzer to assess repository quality, README clarity, code structure, and project activity with AI-generated improvement suggestions.
- **Resume Scanner:** Created a Resume Scanner to analyze ATS compatibility, formatting, and content quality while providing actionable feedback for better shortlisting chances.
- **Portfolio Analyzer:** Designed a Portfolio Analyzer to evaluate UI/UX, accessibility, responsiveness, and overall usability with AI-powered recommendations.

Education

- **Bachelor of Computer Applications (BCA)** — KPB Hinduja College |, Charni Road, Mumbai | Pass | 2026
- **Higher Secondary Certificate (HSC)** — M.L. Dandekar Mahavidyalay, Murud Janjira | 2022
- **Secondary School Certificate (SSC)** — Sir S.A. High School, Murud Janjira | 2020

Technical Skills

- **Backend:** Node.js, Express.js, JavaScript (ES6+), TypeScript, RESTful APIs
- **Databases:** MongoDB, MySQL, Redis, Database Design, Data Modeling
- **Authentication & Security:** JWT Authentication, Bcrypt, Role-Based Access Control (RBAC), API Security
- **Backend Development:** Server-Side Development, API Development, Microservices Fundamentals, Third-Party API Integration
- **Performance & Scalability:** Caching, Performance Optimization, Error Handling, Scalability, Asynchronous Programming
- **Tools & Deployment:** Git, GitHub, Postman, Render, Vercel, Netlify
- **Core Concepts:** Object-Oriented Programming (OOP), Authentication & Authorization, Debugging, Troubleshooting, Problem Solving
